

**FEXIT**  
Fire Exit Door System

Your Life is Valuable to Us.

## FIRE DOORS

Fire doors are vital products for use in places such as residences, shopping malls, hospitals, workplaces, cinemas, theaters and concert halls, hotels, factories and warehouses.

The wide product range of FEXIT fire doors is suitable to meet the needs in these areas.

## FIRE DOORS

Pre-service technical support and after-sale installation and maintenance services for fire doors are FEXIT Metal's area of expertise.

Support from experts must be sought in order to determine the need correctly and to avoid any problems in later use.

## FIRE DOORS

In FEXIT fire doors, visibility as well as architectural functionality is taken into consideration with color and accessory selections suitable for the decoration of the space.

## DOUBLE LEAF FIRE DOORS

FEXIT fire doors have options with single and double wings, glass and panic bars.

Designs that open easily, operate properly, and provide rapid evacuation in case of fire are produced according to the needs of the space.

In FEXIT fire doors, visibility as well as architectural functionality is taken into consideration with color and accessory selections suitable for the decoration of the space.

Fire doors are of great importance for human life. In case of possible fire, it allows emergency evacuation of the scene. It is of greater importance especially in areas where crowded masses live and in places where human mobility is intense. Fire doors, which have functional as well as decorative designs, also have the option of being manufactured in accordance with the concept and colors of stylishly designed spaces and areas with aesthetic concerns where visibility is prioritized.

Fire doors are produced in two types, single-winged or double-winged, in different sizes, depending on the intended use of the spaces. Fire doors, together with all the components used, are manufactured in accordance with internationally valid standards. must be produced and applied.

## SHAFT COVERS

Chassis covers and/or doors are used for intervention in galleries where mechanical, electrical, natural gas, ventilation and sanitary installations pass in buildings. In case of any fire in these galleries, flame, smoke, heat, etc. It also prevents negative conditions from passing through.

For this reason, fire resistance is required in the chassis covers used as per the legislation.

## METAL DOORS WITH VENTS

All kinds of electricity, generator, transformer spaces, installation rooms, boiler rooms, etc. These are metal doors that allow airflow in rooms. Fly wire are also applied behind the vent gaps.

## SHEET METAL DOORS

We produce sheet metal doors by adding aesthetics to a wide range of usage purposes in places such as schools, hospitals, business centers, gyms, shopping malls, metro stations, airports and residences, where we frequently visit.

We can name these doors under headings such as Plain, Glass, Vented, Stainless and Sliding Metal doors.

## GLAZED FIRE DOORS

Especially in areas where people pass frequently, glass-metal doors that allow visibility to the rear are used.

It is possible to use glass in sizes and shapes appropriate to the need and visuality of the space.
